CSCD 211
Lab 1

- I have provided a full Javadoc API. You must write every class and method other than CSCD211Lab1.java.
- This is an exercise in reading the API, understanding the API and following directions. You wil not write additional methods.
- All parameters passed to a method will be final
- All preconditions for the method will be checked
- You may NOT assume the input file specified by the user exists. If it does not, print an error message and re-prompt the user for an input file name.
- You must create an input file that allows you to <u>sufficiently</u> test the specifications of this lab. I have provided a small testing file that is **NOT** sufficient for your final testing.

TO TURN IN

A zip file, in Canvas, by the required due date containing:
- all java files
- the input file(s) used to test your program program
- a test run named cscd211lab1out.txt – testing all aspects
- A jar file containing your FileUtil and SortUtil class files.

We should be able to download the zip and compile your code, and then run your code.
- Name your zip, your last name first letter of your first name lab1.zip (Example: steinerslab1.zip)
